

Coming Soon – A New Age of Innovation

By the end of the present decade, the people in every nation will find themselves involved in a new age of innovation. Tools that are now under development will provide their users with a new kind of verbal empowerment that will enable them to do many things for themselves that they cannot presently do. The principal tool will be a new software invention, *interactive movable type*.

Interactive movable type is the centerpiece of a new digital technology, *the mudoc technology*. With the tools of the mudoc technology, the less-developed countries will be able to – with only a modicum of support from the advanced nations – progress rapidly to full literacy. The personally-empowering new reading tools that will become available to every individual will make it possible for every nation to realize dramatic increases in their levels of productivity and sustainability. By 2020 it will become possible to start reversing most of the self-destructive courses now being seen around the world.

The tools of the mudoc technology will help unleash the intellects, imaginations, and creative potentials of their users – especially those users who don't now read. These tools are described in considerable detail on The Mudoc Corporation's website, <http://mudoc.com>

Take a look – then judge for yourself. If you like what you see and would like to participate in some way in the development of the mudoc tools, take a look at “Call for Collaborators, Contributors, and Co-conspirators” and let us hear from you. The URL for that page is <http://mudoc.com/collab.pdf>

Wayne Reed Porter, CEO

The Mudoc Corporation
Developers of interactive movable type
and the tools of the mudoc technology
(mudoc is a contraction of "meaning unit document"
and is pronounced with a long u as in "music")
